

## **Installation Bulletin** 6/2009

**Kodiak® Composite Decking when using with DrySpace type systems**

**DrySpace type systems are acceptable to use with Kodiak Composite Decking. Note that DrySpace systems can be used and are typically designed for decks with 12” and 16” on-center joist spacing. For 14” and 18” on-center joist spacing a 2x6 filler board can be installed to accommodate.**

**DrySpace Systems should be attached to the sub-structure, never attach to our Kodiak materials. The open space between on-center joists typically should not be more than 11” for the 12” on-center joist spacing and no more than 15” for the 16” on-center joist spacing.**

**Please follow manufactures installation guide when using DrySpace type deck draining systems to allow for proper airflow and drainage.**

**NOTE: You must follow the Kodiak Composite Deck installation guide along with the DrySpace System manufactures instructions in order to keep the Kodiak warranty valid.**
